Application Overview:

transACTION GP Data Collection™

Receiving, Inventory Control, Picking and
Shipping Verification
For
Microsoft Dynamics GP

Problem: Microsoft Dynamics GP is installed and provides all the tracking you could ever want. But your postings are always behind and you're not working with current information. Your customers expect you to have up to the minute information with 100% accuracy. Business and the supply chain are moving at ever increasing speeds.

Solution: transACTION GP Data Collection™ is a Warehouse Management System that allows Real-Time tracking of your inventory and data collection control over receiving, picking and ship verification processes. transACTION GP uses the solid core of Dynamics GP as the infrastructure – providing fast and accurate collection of data where and when those transactions occur.

Benefits:

- Affordable and Scalable
- Seamless Integration with Dynamics GP – No External Database
- Real time visibility of Inventory
- Picking & Shipping Accuracy
- Simplify Customer Compliance Requirements
- Reduce Mis-Shipment and Customer Chargebacks
- Streamline Receiving and Picking Processes
- Track Productivity and Accountability
- Reduce Emergencies – Reduce Express Shipping, Duplicate Shipping and Rush Orders
- Fast and Accurate Data Collection using automated data collection tools such as bar code scanning
- Provides Management with Complete View of inventory, picking and shipping
