

WHY BARCOM?

Barcom helps customers strengthen supply chain operations with solutions that automate inventory management processes and provide real-time visibility. As a software developer and integrator of hardware solutions, Barcom incorporates technologies like barcoding, RFID, RTLS, Fixed Industrial and Machine Vision systems and develops automated, efficient solutions that increase worker productivity, improve accuracy and streamline processes. Barcom's engineers, programmers and help desk representatives offer a collaborative approach; partnering with their customers' IT resources from site analysis to post-implementation support.

Since 1991, Barcom has been recognized as a leader in hardware and software solutions for automated data collection applications in manufacturing, warehouse, distribution and field service environments. In addition to Barcom's technical expertise and real-world experience strengthening supply chain operations, they also provide complete solutions for harsh environments, including transportation management systems, bar code scanning equipment, hand-held and vehicle-mount computers, RFID and RF equipment.

SOLUTIONS AND USE CASES

Inventory Tracking and Management with RFID / RTLS

With RFID technology, Barcom helps clients more efficiently track and analyze the entire supply chain with greater ease. Quickly identify missing inventory, lot trace, and keep track of goods and materials without having to manually scan a barcode or count on employee memory to perform daily tasks.

Benefits of RFID / RTLS:

- Increased Worker Productivity
- Ease of Reporting / Analysis
- Increased Accuracy and Accountability

Workflow Management

Barcom helps customers improve workflow performance from shipping and receiving to material handling and order fulfillment. Connecting workers to the process using RFID technology results in greater productivity and accuracy. Worker productivity is directly related to how a workflow process is carried out. Workers are constantly moving from one location to another; with RFID technology and RTLS, Barcom develops solutions that integrate with client ERP systems that enable them to quickly and easily locate material and inventory locations. When the 'who', 'what', 'where' and 'when' is answered, the result is faster throughput, more reliable information, and happier customers. Barcom's expertise helps clients tighten up workflow processes, control labor costs and increase profitability.

Benefits of Barcom's RFID Solutions:

- Maximize asset and technology investments
- Greater visibility
- Reduce operating costs
- Decrease training time

SERVICES AND CERTIFICATIONS

Barcom is a full-service technology provider with engineers, programmers and project managers on staff. Our professional and technical services experts have years of experience in application development, RFID and wireless networking, hardware set-up and deployment, and much more. Barcom takes the burden off internal IT staff and provides the support needed to help clients exceed their goals, control costs and grow a loyal customer base.

- Services Include:**
- Wireless Infrastructure / Site Surveys
 - Custom Software Development
 - Set-Up & Deployment Services
 - Project Consulting
 - Maintenance & Service Packages
 - Technical Support
